## RLG106H1 - Happiness

**Hours:** 24L

Are you happy? Today happiness is a metric by which a growing number of people assess the quality of their lives, with a range of experts offering innumerable life hacks and opportunities to optimize life. But what does it mean to be happy? And how have people tried to achieve this ever-elusive state? Situated squarely within the study of religion, this course considers how different traditions from around the world and for thousands of years have raised similar questions about happiness—not simply for the sake of reflection but also to do something about it. And their answers have varied: fast, meditate, pray, go to the desert, come together, get high, suffer, renounce God, and/or make lots of money. Readings will include selections from social theory and religious texts as well as a few authors who seem to be (against all odds) kind of happy.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Thought, Belief and Behaviour (2)

## RLG107H1 - "It's the End of the World as We Know It"

**Hours:** 24L/12T

Throughout history, many religious movements have envisioned the end of the world. This course will explore the ways in which different religious movements have prepared for and expected an end time, from fears, symbols, and rituals to failed prophecies and social violence. By examining traditions such as Jewish and Christian apocalyptic texts through to fears of nuclear apocalypse and zombies, the course seeks to understand the ways in which ancient and modern claims of “the end” reflect the aspirations, anxieties, and religious concerns of communities.

**Hours:** 24L

Great Confrontations in Ancient Israel deals with ten episodes recorded in the Hebrew Bible or "Old Testament" in which two parties confronted each other over a great moral issue. The ten confrontations are: (1) God and Humans; (2) Adam and Eve; (3) Cain and Abel; (4) Abraham and God; (5) Jacob and Esau; (6) Joseph and Mrs. Potiphar; (7) Moses and Pharaoh; (8) Moses and Israel; (9) David and Nathan; (10) Elijah and Ahab. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Thought, Belief and Behaviour (2)

## RLG195H1 - Alt-Bible: What Could Have Been

**Hours:** 24S

Why does our contemporary Bible not include any daughters for Adam and Eve or any stories of Jesus as a young boy? What if Enoch was more prominent than Moses or Thomas more prominent than Paul? "The Bible" that we have is not a single book or a simple collection, but something that has grown over time, been the object of contention and argument, and has sometimes been a common ground across traditions. We examine side-by-side writings that have become canonical and writings that once held authority but have not found widespread canonical status, and strive to understand the processes by which we ended up with "the Bible" we have today. Restricted to first-year students. Not eligible for CR/CNR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Creative and Cultural Representations (1)

## RLG196H1 - Innocence and Ecstasy

## RLG197H1 - Enchantment, Disenchantment, Re-Enchantment

**Hours:** 24L

Modernity is associated with disenchantment, secularisation and progress, and has traditionally been understood as the successor to the enchanted, spiritual, and transcendent worldviews of antiquity and the middle ages. Re-enchantment, a term increasingly encountered in popular and academic contexts alike, demonstrates nostalgia for an enchanted past, a discomfort with the modern narrative, and a desire to recover wonder. This course will examine the history of enchantment through a series of readings taken from literature, philosophy,

theology, ranging from Plato to contemporary magical realism. Restricted to first-year students. Not available for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Creative and Cultural Representations (1)

## RLG198H1 - Dystopia: Religion & Gender in Science Fiction

**Hours:** 24L

This course will examine the "what ifs" and imagined worlds of ideal utopias and oppressive dystopias through the lens of religion and gender in Margaret Atwood's *The Handmaid's Tale* and Charlotte Perkins Gilman's *Herland*. Because science fiction and utopian/dystopian literature expresses what an author sees as possible or hopes is possible, but also fears is possible, we will consider science fiction as a political and social critique. Themes to be covered include fundamentalism, totalitarianism, the relationship between technology and religion, religion and reproductive rights, and the potential relationship between religion, gender and oppression. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Creative and Cultural Representations (1)

## RLG199H1 - Religion for Grown-Ups?

**Hours:** 24L

Kant, the great modern philosopher, famously describes enlightenment as our release from self-incurred immaturity or minority. That is, according to Kant, we don't want to grow up. Our immaturity is facilitated especially by religion, whose demands for deference to the authority of texts, traditions, and gods often prevent us from taking full responsibility for our thoughts and actions. But need religion play this role? Is there a religion for grown-ups? This course explores those questions by reading autobiographical accounts of philosophers who describe how their study of philosophy either strengthened or strangled their youthful religious convictions. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Thought, Belief and Behaviour (2)

## RLG200H1 - The Study of Religion

**Distribution Requirements:** Humanities

**Breadth Requirements:** Thought, Belief and Behaviour (2)

## RLG201H1 - Indigenous Spiritualities and Religions

**Hours:** 24L/12T

This course examines how Indigenous communities saw the world before contact—primarily exploring early creation narratives and ways of engaging with the natural world through ceremonials of reciprocity and acknowledgements. It engages with how early colonial societies and Western-based religions evaluated and understood Indigenous spiritualities and practices. We consider Indigenous critiques of Western religion as it has actually been practiced as opposed to what has been taught as constituting the ideals of civilization. Finally, we analyze how Indigenous communities and culture begin to create “New Religions” that blend Indigenous values and thinking with aspects of Western culture or emerge in direct response to re-imagining spirituality in attempts to prove humanness and civility in contexts where little of Indigenous culture and values has been seen as acceptable.

**Distribution Requirements:** Humanities

This course is designed to introduce students to some of the ways in which anthropologists have studied and thought about religion. The emphasis is not on memorizing things people believe and do in different societies but on understanding how anthropologists have tried to explain religious phenomena. The themes covered in the course include: magic and religion; the (ir)rationality of belief; the body as a site of knowledge; ritual; ethical self-cultivation; and religion's role in the secular age.

Religions are more than beliefs or sacred texts. They are also formed through buildings, bodies, objects of devotion, images, websites. We examine how religion is embodied, circulated, built, played, displayed, and painted. We ask why religions are often constituted through feasting or fasting, excess or asceticism, abundance of objects or destruction of icons. Religious activity is explored through its connections with objects of wealth and consumption—not just great art, but items common within popular culture. The overall aim is to 'see' religion in a new way—and to understand the role of the senses in the formation of religious experience.

## RLG325H1 - The Uses and Abuses of the Bible

**Hours:** 24L

From politics to popular culture, the Bible has shaped people and nations for good and for ill. This course introduces the Jewish and Christian Bibles and considers case studies of how biblical texts have been interpreted. The Bible has been used to bolster slavery and white supremacy and to inspire political liberation movements. It has been used to justify annihilation of Indigenous people by Christian colonists yet given hope to Jews that next year in Jerusalem might be better. How can the same "book" be used for such different purposes? This course focuses on the cultural and political consequences of

biblical interpretation. An underlying premise is that the Bible is not static but is rather a nomadic text as it is continuously interpreted in ways that sometimes contribute to human flourishing, but also can result in violence, human diminishment, or death.

## RLG326H1 - Roots of Christianity and Judaism

What does it mean to be modern? Words like “modern,” “modernity,” and “modernism” are used to mark a fundamental boundary between our era and all that came

before it (or lies outside of it); but most of us are hard-pressed to offer a solid account of what exactly this boundary is. This course examines the relationship between: a fundamental shift in the nature of daily experience; an order-of-magnitude expansion of the power of the State; a dramatic reorganization of religious experience and cultures; and a tremendous growth in the enterprise of Western science and technological production. We trace this reorientation over the last two centuries and examine its consequences using philosophical, literary, theological, and scientific sources, as well as recent scholarly work on the topic.

## RLG419H1 - Ghosts to Ancestors: Racialized Hauntings and Reparative Promise in Psychoanalysis

**Hours:** 24L

All forms of injustice disfigure both societies and psyches. Racist, sexist, and other unconscious fantasies of evil and persecuting 'others' generate social injustice. At the same time, social injustice distorts the mind. This "dual track" process can drive human beings and their societies mad. Justice depends upon transformations of social structures and moral codes as well as changes within human minds. In order for psychoanalysis to realize its own potential for facilitating justice, it must confront its own historical contribution to injustice. Through a close reading of selected texts from Sigmund Freud and the activist psychiatrist Franz Fanon, this course explores the inherent tensions between colonizing and emancipatory themes within psychoanalytic discourses. Both Freud and Fanon contribute to a psychoanalytic critical theory that have influenced several contemporary ethnographic writers who explore the intricate ways in which social and cultural realities are internalized as unconscious hauntings and tormenting spirits across generations.

## RLG421H1 - Fragments of Redemption: Sigmund Freud and Theodor Adorno

**Hours:** 24S

This course will challenge the prevailing view that the thought of Sigmund Freud and Theodor Adorno is so deeply pessimistic as to be devoid of hope. Freud's psychoanalytic theories are widely (mis)interpreted in the register of a crude pansexualism and biological determinism. Adorno's critique of society and the individual is often (mis)interpreted as so ruthlessly pervasive that it forecloses on any possibility for emancipatory transformation. This is a distorted view of both thinkers, that misses the hopeful, utopian currents that motivate and shape psychoanalysis and critical theory. The course will explore the emancipatory currents in Freud and Adorno, and their implications for potentialities of individual, social and ecological transformation.

## Introduction

Rotman Commerce at the University of Toronto offers a rigorous curriculum combining studies in management, economics, and the arts and sciences for an enriched professional undergraduate experience. The program explores the role of commerce in modern society while developing skill and confidence in analysis, effective communications and decision making.

The Bachelor of Commerce degree builds on a common foundation of a range of business disciplines and economics. Rotman Commerce students specialize in one

of three areas: Accounting, Finance and Economics, or Management. Each stream combines courses in management and applied economics with a variety of courses in the arts and sciences. The balance assures graduates of a solid understanding of business and modern society along with a command of critical skills across business disciplines, decision-making, and leadership.

Rotman Commerce graduates enter a wide range of professions, and frequently become financial analysts, accountants, marketing analysts, economists, managers of firms and government, or entrepreneurs. Some commerce students elect to undertake post-graduate studies. Law schools and MBA programs have been particularly favoured destinations of recent graduates.

Faculty from the Rotman School of Management who teach in Rotman Commerce are listed above.

## Bachelor of Commerce (BCom) Degree Requirements

Requirements for the BCom are stated on the [Degree Requirements](#) page.

## Rotman Commerce Notes

Enrolment in Rotman Commerce programs is limited. Most students are admitted to first-year with Rotman Commerce Guaranteed Admission (see below for terms and conditions). Rotman Commerce students choose their Specialist program after first year, provided that the Guaranteed Admission requirements have been met. A number of spaces are also available in second-year for other Arts & Science students who were not admitted with the guarantee (see enrolment requirements with the program information below for details).

### Part-Time Students:

Students holding Rotman Commerce Guaranteed Admission, who have applied for and been admitted to Part-Time study, will be assessed for entry into the Rotman Commerce program at the point when they have completed 4.0 credits including the Guaranteed Admission requirements. To qualify under the Part-Time provision, students must have been enrolled in a part-time course load from the beginning of each session. Students may

repeat each of the required courses only once in order to attain the minimum marks.

### Additional Notes:

- Tuition Fees: Students enrolling in Rotman Commerce programs pay fees that are higher than other Arts & Science programs.
- Mathematics Note: [MAT133Y1](#) satisfies the minimum Program requirements. Students who are likely to enrol in 200+ level MAT, STA and/or CSC courses are advised to take [MAT135H1](#) and [MAT136H1](#) or [MAT137Y1](#) instead, noting that [MAT137Y1](#) is a theoretically-oriented course for mathematically-based disciplines such as Mathematics, Computer Science, and Statistics.
- Maximum Term Load: Rotman Commerce students are limited to a maximum of 6.0 credits in any Fall/Winter session of their program and a maximum of 2.0 credits in their Summer session.
- Students who have completed the requirements of their Admission Guarantee by the end of the Winter Session are eligible to enroll in 200-level RSM courses during the Summer Session following their first-year.

## Rotman Commerce Programs

### Accounting Specialist (BCom) - ASSPE2676

Rotman Commerce at the University of Toronto offers an innovative curriculum combining studies in management, economics, and the liberal arts for an enriched professional undergraduate experience. The program explores the role of commerce in modern society while developing skill and confidence in analysis, effective communication, and decision making. The Rotman Commerce program offers a Bachelor of Commerce (BCom) degree in three different specialist programs, Finance & Economics, Accounting, and Management.

All programs within the Bachelor of Commerce degree build on a common foundation of business and liberal arts courses. Rotman Commerce students specialize in one of three programs: Accounting, Finance and Economics, or Management. Each program combines courses in management and applied economics with a variety of advanced courses in the liberal arts and sciences. The balance assures graduates of a solid understanding of business and modern society along with a command of critical skills in decision-making and organizational leadership.

Rotman Commerce graduates frequently become economists, accountants, actuaries, financial analysts, marketing analysts, managers of firms and government, or proprietors of small businesses. Some Rotman

Commerce students elect to undertake post-graduate studies in the form of further university education: law schools and MBA programs have been particularly favoured destinations of recent graduates.

### Enrolment Requirements:

This is a limited enrolment program. Students must have completed 4.0 credits and meet the requirements listed below to enrol.

### For students admitted to the Rotman Commerce admission category in Year 1:

#### Special Requirement

- Students are admitted to Year 1 of the Faculty of Arts and Science in the Rotman Commerce admission category with an “admission guarantee.” Students admitted with the guarantee are invited to enroll in the program after first year, provided that the course and grade requirements below (i.e., Guaranteed Admission requirements) are met.
- Failure to meet any of these requirements, or failure to complete all the required courses within the calendar year (assuming full-time studies), will result in losing the admission guarantee.

#### Completed courses (with minimum grades)

The following courses with the stated minimum grades are required:

- RSM100H1 (67%)
- ECO101H1 (63%) and ECO102H1 (63%)
- MAT133Y1 (63%) / ( MAT135H1 (60%), MAT136H1 (60%)) / MAT137Y1 (55%) / MAT157Y1 (55%)

#### Notes:

- Students may repeat any of the required courses once, in order to attain the requisite mark. The repeated course(s) must be completed within the calendar year (as per the terms of the “guarantee”); as such, the repeated course(s) must be taken during either the Winter or Summer Session of first-year (i.e. a student may not extend the terms of their guarantee in order to attain the minimum marks).
- Note that none of the required courses may be completed using the CR/NCR option.

### For students NOT admitted to the Year 1 Rotman Commerce admission category:

#### Special Requirement

- Students must complete the Rotman Commerce Supplemental Application in late April or May of each year.
- All course admission requirements must be completed by May 1 to be eligible.
- For information regarding admission to the program, contact Rotman Commerce at [rc.admissions@utoronto.ca](mailto:rc.admissions@utoronto.ca)

#### Minimum Course Grades and Minimum Grade Average

A limited number of spaces in Rotman Commerce are available to Arts & Science students who were not admitted to first year with the Admission Guarantee.

Minimum grades in each listed course, combined with a minimum grade average in required courses, is needed for entry. The following courses with the stated minimum grades are required:

- MGT100H1 (67%) / RSM100H1 (67%)
- ECO101H1 (63%) and ECO102H1 (63%)
- MAT133Y1 (63%) / ( MAT135H1 (60%), MAT136H1 (60%)) / MAT137Y1 (55%) / MAT157Y1 (55%)
- Note: in the case of repeated attempts, the highest mark attained will be considered when calculating this average

Admission will be based on marks and the Rotman Commerce Supplemental Application. Admission to Rotman Commerce is competitive. Meeting the minimum academic requirements does not guarantee admission to the program. An average of at least 73% in prerequisite courses is needed for admission consideration.

#### Notes:

- If an Arts and Science student is admitted to Rotman Commerce, then MGT100H1 will be considered equivalent to RSM100H1.

## Programs

### Book and Media Studies

The Book and Media Studies program is an interdisciplinary and historical investigation of the role of printing, books, reading, and electronic and digital media in cultures past and present. Its topics include: manuscript and book production, internet publishing, book illustrations, advertising, censorship, reading and entertainment alongside the development of mass media—the advent of radio and the emergence of television, global telecommunications, social media, and the internet.

The new Arts & Science Internship Program (ASIP) stream is available to students entering their second year of study in Fall 2021 and enrolled in the Book and Media Studies Major.

### Celtic Studies

The Celtic Studies Program introduces students to a wide variety of undergraduate courses on the languages, literature, history, music, folklore, art and archaeology of the peoples of Ireland, Scotland and Wales. We examine Celtic identities in the modern as well as the ancient and medieval world and explore the transmission of these traditions to Canada and the United States.

### Christianity and Culture

Christians claim that the Gospel has the power to transform not only individual lives but whole societies. The Christianity and Culture Program offers students an opportunity to explore this bold claim through critical, academic studies of how the Christian faith has shaped—and been shaped by—the institutions, artistic expressions, and intellectual achievements of Western and world cultures. Courses provide a comprehensive and humanistic approach to Christian experience, past and present. By focusing on students' personal engagement with primary sources, the Program fosters scholarly exchange, intellectual community, and a shared search for meaning.

### Mediaeval Studies

The term “mediaeval” is the name given to a period in the history between “antiquity” and “modernity,” or roughly the fifth through the fifteenth centuries. Its parameters are broad and boundaries are not clearly defined. The Mediaeval Studies program adopts an interdisciplinary approach to exploring this world through the study of subjects such as the Latin language, art, literature, law,

gender roles, and religion. As well as examining the mediaeval foundations of modern culture, students also explore “mediaevalisms” that appear in our own culture through such media as film, literature, drama, and art, and introduce new approaches including digital humanities.

## MST341H1 - Middle Ages by the Numbers

**Hours:** 24L

Numbers and their uses often appear to be absolute fact: a thousand dollars is exactly that, not more or less; and if you weigh fifty kilos, that's what you weigh. But the use and meaning of numbers—for recording and counting dates, money, weights, distances, and myriad other functions—is not, in fact, devoid of cultural, historical, and political context. Mediaeval Europe provided a bewildering range of calendric systems, currencies, systems of

measurement, and numerical symbolism was much used in art, music, religious thought, and literature. This course provides an introduction to the various uses of numbers in this period across different regions and cultural contexts.

## Introduction

The Sexual Diversity Studies program (Specialist, Major, Minor) enables students to explore, analyze, and challenge the ways in which sexuality shapes people's lives in both local and global contexts. The program provides vibrant interdisciplinary scholarship and academic learning on the historical and contemporary formations of sexual practices at the intersections of race, class, gender, disability, and citizenship status, among other social relations and processes. Our courses are designed to foster critical conversations of queer and normative sexualities; the formation of sexual, racial, and gender, and gender-non-conforming personhood; and the role of sexuality in culture and politics both in North America and transnationally.

musicians, philosophers, religious and political thinkers, and scientists of note. The richness of the Slavic cultures has a special significance for Canada, since the vast influx of Slavs, which began in the last century, has contributed greatly to the Canadian cultural mosaic.

The Department of Slavic Languages and Literatures offers an extensive range of courses in Russian, Polish, Ukrainian, Czech and Slovak, Bosnian, Croatian, and Serbian languages, literatures, culture, and film as well as in Slavic linguistics. Within this range there are courses suitable for inclusion in a wide variety of programs of study, whether or not the student has studied any Slavic language previously. Some students may specialize in Slavic Languages and Cultures, i.e. Russian, Polish or Ukrainian (see Programs of Study). Others may simply wish to gain a working knowledge of Russian or another Slavic language to aid their reading of important material in another field. Language study emphasizes small instructional groups, with some laboratory or conversational practice, and the use of literary materials.

Courses in the literatures and cultures of various Slavic countries explore the artistic, intellectual, and social currents of their civilizations, trace the literary history of each country, and examine the works of major authors. Many of our literature, culture, and film courses are taught in English and do not require special linguistic preparation.

The growing importance of Eastern Europe in contemporary affairs has had the effect of making academic study of this area especially lively and relevant. The student whose interest in the Russian or East European world is political, historical, or sociological can specialize in Russian and East European Studies, or pursue a course in Political Science, History, or Sociology, and at the same time take language courses, and perhaps selected courses in literature, in this Department. Students planning to specialize in Economics, Psychology, Mathematics, or any number of other fields, who have a special interest in the Russian or East European area, will find an advanced knowledge of Russian or of another Slavic language an important intellectual and professional asset.

Students intending to take a Program offered by the Department are asked to study carefully the Programs of Study and are urged to begin their language training as soon as possible. A Departmental brochure is available on request.

## Faculty of Arts & Science Language Citation

The Department of Slavic Languages and Literatures participates in the Faculty of Arts and Science's Language Citation initiative. Students may achieve this Citation in Bosnian, Croatian, Czech, Polish, Russian, Serbian, and Ukrainian. Students interested in completing the Language Citation in languages taught in the Slavic Department but not listed here should consult the Undergraduate Coordinator of the Department of Slavic Languages and Literatures.

Language study is a demanding and intellectually rewarding educational experience. Our students learn to communicate both orally and in writing in other languages and are thus able to experience other parts of the world in more intimate ways. Their access to other cultures opens doors for further study and employment. Students in our department also have the opportunity to read a vast array of world-renowned authors in the original languages, as well as works – normally not available in English – in other areas of study, for example, cinema studies, drama, folklore, history, intellectual history, philosophy, mathematics, and political science.

The Language Citation recognizes a significant level of achievement in language study. For course selection students should consult the Undergraduate Coordinator as early as possible since not every language course is offered each year. Students who begin language study at the Intermediate level should consult the Undergraduate Coordinator for approval of advanced literature and culture courses that may satisfy the requirements for the Language Citation.

The Language Citation in Bosnian, Croatian, or Serbian is available to students who complete [SLA257H1](#), [SLA277H1](#), and an additional credit in South Slavic literature or culture with readings and discussion in the target language with a grade of at least B-. The Language Citation in Macedonian is available to students who complete [SLA209H1](#), [SLA213H1](#) and an additional credit in South Slavic literature or culture with readings and discussion in the target language with a grade of at least B-. Consult the Undergraduate Coordinator for approval of advanced literature and culture courses that may satisfy the requirements for the Language Citation.

The Language Citation in Czech is available to students who complete [SLA204Y1](#) and one (1.0) additional credit in Czech literature or culture with readings and discussion in the target language with a grade of at least B-.

The Language Citation in Polish is available to students who complete [SLA206H1](#), [SLA207H1](#), [SLA306H1](#) and [SLA336H1](#) with a grade of at least B-.

## Introduction

Sociology's key principle is that patterned social relationships create opportunities for, and place constraints on, human action. The influence of this idea is widespread. New research agendas in law, literature, economics, and other disciplines reflect the notion that beyond individual motives, goals, values, beliefs and emotions, patterned social relationships help to make us who we are. Our courses and faculty research examine how patterned social relationships shape and are shaped by gender roles and families; health; immigration and ethnic relations; labour markets, work and social inequality; political structures and processes; crime, law and deviance; culture; cities; and networks, and communities.

To test explanations regarding the influence of social relationships on various aspects of human behaviour, sociologists collect and analyze observational, survey, experimental, and historical data. Accordingly, the sociological perspective and the research skills learned by studying sociology prepare students for a wide variety of careers in industry, government, education, politics, health and journalism. Medical, legal, and environmental fields report an increasing need for sociologists. Municipal, provincial and federal governments hire in areas like urban sociology, community relations, policy and planning, and statistical analysis. In private business, sociologists work in management consulting firms and polling organizations, as well as in labour relations and human resources.

A professional career in sociology requires training beyond the undergraduate level. However, the critical, analytical and research skills that undergraduate sociology students learn open many employment opportunities. Over a third of Canadian undergraduates in sociology go on to be employed in business, finance and administrative occupations, and just under a third in

government service, social science, and educational fields.

Some people are worried that we risk becoming less human if we allow ourselves or others to engage in widespread self-transformation through the insertion of some kinds of devices into human bodies (e.g., computers, becoming cyborgs) or as a result of interventions such as genetic engineering, etc. Others are concerned that the use of some technologies, or barriers to their use, will increase global inequalities. **Hours:** 24L

In advanced economies, schooling is a near-universal and highly structured institution. During the most impressionable times in their lives, children and adolescents go nearly every day to sit in the same pattern of classes with the same peers. In theory, students both within and across schools are supposed to learn the same things, at approximately the same time, and engage in similar rituals. And yet, this level of standardization often leads to substantively different outcomes across groups. This course investigates the structure of schools and the achievement hierarchies within and across them.

**Hours:** 24L/12T

This course examines how society has gone about controlling specific types of deviants (e.g., gang members, sex and drug offenders) and acts of deviance (e.g., organized crime, the deviance of social control agents). ## SOC341H1 - Sociology of Scandals

**Hours:** 24L/12T

Scandals – corporate, political, or bureaucratic – pervade media reporting and public debate. This course takes up scandals as sociological events: what are the causes of scandals? How are scandals ‘made’? How are scandals represented? And what are the consequences of scandals: do they discredit some actors, and lead to cultural, institutional, and organizational change? Do they lead to reform, used for new professional mobilization, new forms of regulation and oversight, targeted for legal intervention, or do they generate new political shifts, or new memories or narratives? Or are they ignored? The course will also pay attention to how scandals are made public: leaks, investigations, whistleblowers, and media reporting, and the framing of events as scandals worthy of public condemnation. Finally, with scandals often thought of as singular, this course allows students to consider what is in common between these events. ## SOC372H1 - Transnational Asia

**Previous Course Number:** SOC395H1  
**Hours:** 24L

This course approaches Asia from a transnational perspective to enhance our understanding of the complexities involved in Asia's contemporary transformations. By departing from traditional nation-state-oriented analyses, this class explores how Asia shapes and is shaped by trans-Pacific politics, war and colonial legacies, global capitalism, labor migration, international norms of citizenship, urban development, and flows of ideas and popular culture. By closely examining Asia's transnational interconnectedness, we question the prevalent notion of Asia and regional studies and highlight the contradictions and challenges Asia faces in its political, economic, social, and cultural spheres. This critical approach is expected to offer a deeper investigation of Asia in and of itself while critiquing dominant assumptions and frameworks found in existing approaches to Asia.

## SOC373H1 - Deconstructing 'Muslim American' - Race, Nationalism, and Religion

**Previous Course Number:** SOC352H1  
**Hours:** 24L/12T

Since the 2016 U.S. presidential election, Muslim Americans have once again been cast as both threatening "outsiders" as well as examples of what makes the United States a "nation of immigrants." What do these contestations teach us about how race, nationalism, and globalization shape immigrant identities? Taking Muslim Americans as a case study, this course will examine a range of topics, from everyday boundary-making to ongoing global politics pertaining to different Muslim groups in the United States, often drawing comparison with Muslims in other Western countries. More broadly, the course aims to unpack how various global and local/national forces shape the contours, dimensions, and meanings attached to an identity category. To that end, the course begins with some prominent sociological

theories, such as intersectionality, double-consciousness, and Orientalism. We will apply these theoretical lenses to analyze issues of race, globalization, cultural citizenship, media representation, and political integration in Muslim American and immigrant experiences.

**Prerequisite:** 1.0 SOC credit at the 200+ level

## SOC389H1 - Sociology of Scandals

**Hours:** 24L

Scandals – corporate, political, or bureaucratic – pervade media reporting and public debate. This course takes up scandals as sociological events: what are the causes of scandals? How are scandals ‘made’? How are scandals represented? And what are the consequences of scandals: do they discredit some actors, and lead to cultural, institutional, and organizational change? Do they lead to reform, used for new professional mobilization, new forms of regulation and oversight, targeted for legal intervention, or do they generate new political shifts, or new memories or narratives? Or are they ignored? The course will also pay attention to how scandals are made public: leaks, investigations, whistleblowers, and media reporting, and the framing of events as scandals worthy of public condemnation. Finally, with scandals often thought of as singular, this course allows students to consider what is in common between these events.

## SOC408H1 - Advanced Studies in Organizations

**Previous Course Number:** SOC489H1  
**Hours:** 24L

This course covers central issues in the field of organizational sociology. It explores different perspectives on why complex organizations look and operate the way that they do, and examines the social consequences of their behavior. The first part of the course focuses on the evolution of the modern firm. We will trace the history of different models of management and strategy, and

evaluate their relative efficacy. The second part of the course examines how organizations shape, and are shaped by, their environments. The third part of the course will explore how organizational behavior influences social inequality, and how social inequality shapes the way that modern organizations function. We will make use of both social scientific analyses and Harvard Business School case studies. Restricted to 4th-year sociology majors and specialists.

**Exclusion:** SOC489H1 (Topics: Sociology of Organizations), offered in Fall 2017 and Fall 2019

## SOC409H1 - Sexuality and Research Design

**Previous Course Number:** SOC485H1  
**Hours:** 24L

Research designs are much like jigsaw puzzles, but harder: they require scholars to carefully connect a variety of distinct yet intricately linked pieces into a thematically consistent, practical and defensible whole. Few tasks in the research process are as commonplace and as riddled with difficulty. This semester length course will provide a forum for students to compose a research design on the topic of sexuality using qualitative approaches that include in-depth interview and ethnography. Throughout the course, students will read a variety of works that describe the goals, procedures, and underlying logic of research design. These works will draw from articles and chapters on methodological problems and issues, and also from actual studies that use in-depth interview and ethnography in sexuality studies. Restricted to 4th-year sociology majors and specialists.

**Previous Course Number:** SOC495H1  
**Hours:** 24L

Global Inequality and Contentious Politics: This is a seminar course designed to understand global inequalities and contentious politics. Inequality has been one of the primary subjects in sociological inquiries and its scope naturally expands to a global dimension as our societies are increasingly shaped by international connections. This seminar focuses on understanding various manifestations of global inequalities intersected by international hierarchy, race, gender, and class. Yet, these divisions and injustices are neither static nor unchallenged as people react to these realities via divergent methods. This class will read major theoretical approaches to social movements and examine contentious mobilizations taking place in different geographies around the world to reshape the global order ridden with disparities. Empirical cases of contentious activism include anti-globalization protest, the Occupy movement, campaigns for migrant care workers, resistance against American military bases, and the Me Too movement. Restricted to 4th-year sociology majors and specialists.

# South Asian Studies

Students study South Asia in an approach attentive to global formations. They are introduced to the study of South Asia—Bangladesh, India, Pakistan, Nepal, Sri Lanka—through a wide angle view of Asian modernities, political economies, and cultures, all the while delving into specialist close-ups of South Asia. With open access to comparative courses in the Contemporary Asian Studies program, students can learn from specialists in South, East, and Southeast Asia.

With a curriculum motivated by the moving present—the changing face of South Asia today—the South Asian Studies minor offers rigorous training in major debates and questions in the rich field of South Asian Studies, and provides a basic foundation for many directions of future study. From historical contexts of ethnic conflict, to postcolonial readings of ancient traditions, to the politics of religious and ethnic identities, to the workings of vast-scale democracy and capitalism, to the worlds of cinema and public culture, students are exposed to the dynamic landscapes—political, material, and mythic—that constitute South Asia today.

Students may also be interested in the closely connected Contemporary Asian Studies program.

## Introduction

### Overview:

Spanish is the most widely spoken language of the Americas, with 130 million speakers in North America alone, more than 400 million worldwide, and with growing numbers in Canada. It is the fourth most widely spoken language in the world, and it is the official language in 21

countries on three continents: Europe, Africa, and Latin America.

Spanish opens the door to the study of a rich range of cultural expressions in literature, film, and art, from medieval and early modern Transatlantic world, to the literary and cultural productions of contemporary Spanish and Spanish American societies. The department offers a wide selection of courses at the introductory (second year), intermediate (third year) and advanced (fourth year) level in literature, culture, and linguistics. Students are encouraged to complement and expand on the training they receive in these courses by taking courses in other academic units. By the time of their graduation, our students acquire skills to read analytically fictional and non-fictional, literary and visual texts. They thus gain a deep knowledge of Hispanic cultures, as well as the skills to reflect critically on the world in which they live.

Spanish also opens the door to the study of the Romance language family. The Department offers students the opportunity to advance their language skills through the systematic reflection on the language structure, from the sound system to the morphology and syntax. Through a variety of courses with a theoretical and experimental focus in linguistics, students acquire basic skills that can be transferred to teaching or research programs. Through collaboration with other language and linguistics programs, students are provided with opportunities and training to conduct research in linguistics with a focus on the Spanish language.

### What can I do with a degree in Spanish?

Plenty! Spanish is recognized as one of the four United Nations official languages. A degree in Spanish linguistics, literature, and culture opens up career paths both domestically and internationally. The skills that students acquire through the study of Spanish and of the Spanish-speaking world either prepare them directly for or are an asset in some of the following fields:

- media, journalism, marketing, public relations;
- domestic government services and NGOs; foreign services and foreign affairs specialist; international development; political aid,
- commerce, finances, tourism, and hospitality
- post-graduate studies and academic careers; cultural work
- editing, publishing, translation, education
- library and information sciences
- careers in the health profession, including medicine, speech pathology and audiology
- computational linguistics, speech recognition, and synthesis

The Department offers Specialist, Major and Minor programs, as well as language citation certificate.

### How is the program structured?

For many students, our program begins with the language sequence.

### Language sequence:

1. The Department reserves the right to place students in the language course best suited to their linguistic preparation.
2. Students who, in the department's assessment, have adequate knowledge of Spanish may be required to take Spanish literature, culture or linguistics course instead of a language course at any level.

The progression of courses in the language sequence is designed to accommodate a wide range of previous language experience. Students are placed in the appropriate language course based on their proficiency, as determined by the online placement test and departmental assessment.

### Placement test:

Students who have studied Spanish before joining the department should take the on-line placement test by going to the following link:

<http://spanport.utoronto.ca/undergraduate/spanish>

Please, read carefully the instructions that explain how to take the test. The placement test can be taken only once.

If you cannot assess your placement level from the available information, please contact the Associate Chair, Undergraduate Studies and you will receive personal advice for placement in the language sequence.

### Students with no previous knowledge of Spanish: enrol in SPA100Y1.

The recommended sequence of language courses for those students who have had little or no previous training in the language is the following:

SPA100Y1 > SPA220Y1 > SPA320Y1 > SPA420H1

### Students with previous knowledge of Spanish: take the placement test.

Students who have studied Spanish before joining the department may enrol in several courses – beginners', intermediate or advanced – depending on their background and their level of preparation. This includes those students who have traveled or lived briefly in the Spanish-speaking world.

The recommended sequence of language courses for those students who join the department having mastered a beginner's level of Spanish, including those who successfully completed SPA100Y1, is the following:

SPA220Y1 > SPA320Y1 > SPA420H1 or

SPA120Y1 > SPA320Y1 > SPA420H1

The recommended sequence of language courses for those students who join the department having mastered an intermediate level of Spanish, including those who have successfully completed SPA220Y1, is the following:

SPA320Y1 > SPA420H1

### Native or bilingual speakers of Spanish:

Those students who have native fluency in Spanish because they have had a life-long exposure to spoken Spanish in an informal context (i.e., those who have lived in a Spanish-speaking country, or those who live in a Spanish-speaking family) – should enrol in SPA219Y1. Students who qualify for this course have distinctly different learning needs than those students who learned Spanish as a foreign language. They have a native knowledge of the language and are able to understand and speak Spanish, but they have had little or no exposure to written Spanish. The recommended language sequence for such students is the following: SPA219Y1 > SPA420H1

Students who have completed the equivalent of a high school degree or higher level of education in a Spanish-speaking country can skip the language sequence. However, if they have not studied descriptive grammar, they should enrol in SPA420H1. Please consult the Undergraduate Coordinator for placement advice.

Throughout the language sequence, stress is laid both on the cultural component of language acquisition and on the range of practical applications to which both the spoken and the written language may be put. Courses in business Spanish and in the structure of the Spanish language

provide an array of possible options for students in the upper years.

### Literature, culture and linguistics courses:

Students are encouraged to enroll early on in their academic career in several second-year courses as they transition from the language sequence ([SPA219Y1](#) / [SPA220Y1](#) / [SPA320Y1](#)) into the third and fourth-year courses in literature, culture, and linguistics.

[SPA258H1](#) is a foundational course for the students who plan to pursue a major or a specialist degree in Spanish. While permitting students to advance their skills in reading and composition, this course also introduces information literacy, and the terms and methods of literary analysis through the study of a wide selection of brief literary texts. Intermediate level students ([SPA220Y1](#)) who are comfortable reading short texts, and who have well-developed writing and speaking skills for the intermediate level, may take that course while enrolled in [SPA220Y1](#) (preferable in their second semester of [SPA220Y1](#)). Others should complete [SPA220Y1](#) before taking [SPA258H1](#).

The other courses offered in the 200-level ([SPA221H1](#) and [SPA259H1](#)) are not required for a Specialist or Major degree but are recommended for students who need to hone their language skills before advancing to the upper-level literature, culture and linguistics courses.

[SPA221H1](#) (Spanish Pronunciation) is a companion course to [SPA220Y1](#). Students who are interested in this course are best advised to enroll while taking [SPA220Y1](#).

[SPA259H1](#) is a course that introduces students to the techniques of cultural analysis. Although not a degree requirement, this course is a popular option for students enrolled in the program. It has the same language requirements as [SPA258H1](#) (students can take it either while enrolled in [SPA220Y1](#), or upon completion of [SPA220Y1](#)).

**Following the language sequence**, and upon successfully completing [SPA258H1](#), students pursuing a specialist and major degrees will fulfill in the due course of their university career the remaining degree requirements:

- One 0.5 credit in Hispanic linguistics at the 300/400-level
- One 0.5 credit in Spanish peninsular literature at the 300/400-level
- One 0.5 credit in Spanish American literature at the 300/400-level
- [SPA420H1](#)
- [SPA454H1](#) or [SPA489H1](#)

[SPA420H1](#) (Advanced Grammar), [SPA454H1](#) (Cervantes: Don Quixote) and [SPA489H1](#) (Latin American

Transculturations) are the capstone courses in the Spanish program. Students should plan to take these courses towards the end of their university studies, as by that time they will have acquired language fluency, and become versed in the reading of extended and complex texts in Spanish, and will have honed their skills in textual analysis.

## Introduction

Statistical Science is the science of learning from data. Statistical science plays a large role in data science, which broadly encompasses computational and statistical aspects of managing and learning from large and complex datasets. Statistical theory and methodology have applications in almost all areas of science, social science, public health, medicine, engineering, finance, technology, business, government and industry. Statisticians and data scientists are involved in solving problems as diverse as understanding the health risk of climate change, predicting the path of forest fires, understanding the role of genetics in human health, and creating a better search engine. New ways of collecting, organizing, visualizing, and analyzing data are increasingly driving progress in all fields and have created demand for people with data expertise.

The Department of Statistical Sciences offers specialist, major, and minor programs in Statistics and a specialist program in Data Science and a specialist and a major

program in Actuarial Science (please refer to the Actuarial Science section of the academic calendar for more information on Actuarial Science programs). All Statistics programs offer training in statistical methods, theory, computation, and communication, as well as an understanding of the role of statistical science to solve problems in a variety of contexts. The specialist program in Statistical Science: Theory and Methods emphasizes probability and statistical theory as underlying mathematical frameworks for data analysis. The specialist program in Statistical Science: Methods and Practice has greater emphasis on collaborative statistical practice. Students in this program combine their study in statistics with a focus in a discipline that relies on statistical methods. The specialist program in Data Science is offered jointly with the Department of Computer Science. Students in this program acquire expertise in statistical reasoning and methods, in the design and analysis of algorithms and data structures for handling big data, in best practices for software design, and in machine learning. The major program in Statistics offers the most flexibility in choice of courses. This program gives students a broad understanding of the methods and computational and communication skills appropriate for effective statistical problem solving. The minor program in Statistics is designed to provide students with some exposure and skills in statistical methods which is intended to complement programs in other disciplines that involve quantitative research.

## Arts & Science Internship Program

The new [Arts & Science Internship Program](#) (ASIP) stream is available to students entering their second year of study in Fall 2021 and enrolled in the Data Science Specialist, the Specialist in Statistical Science: Methods and Practice, and the Specialist in Statistical Science: Theory and Methods.

- Enrolment is limited and requires a supplemental application. Students enrolled in the ASIP stream will be required to complete mandatory Professional Development programming plus a minimum of 12 and maximum of 20 months of

paid, full-time work experience. The time to degree completion for students enrolled in ASIP will normally be 5 years. There is an additional cost to participate in the ASIP stream.

- Students will typically be admitted to the ASIP stream for the Fall term of Year 2 of study, however starting in Fall 2022, in exceptional circumstances students, including transfer students, who enrolled in an eligible program in the Summer after Year 2 can be admitted to the ASIP stream for the Fall of Year 3. Year 3 entry into the program requires prior approval of the Associate Chair, Undergraduate or their designate and the Experiential Learning & Outreach Support (ELOS) Office.
- Further details about ASIP, including eligibility requirements and application procedures, can be found [here](#). Students may also visit the [ASIP webpage](#) or contact the ELOS office at [asip@utoronto.ca](mailto:asip@utoronto.ca).

## Statistical Sciences Programs

### Data Science Specialist (Science Program) - ASSPE1687

The field of Data Science is a combination of statistics and computer science methodologies that enable 'learning from data'. A data scientist extracts information from data, and is involved with every step that must be taken to achieve this goal, from getting acquainted with the data to communicating the results in non-technical language. The Data Science Specialist program prepares students for work in the Data Science industry or government and for graduate studies in Data Science, Computer Science, or Statistics. Students in the program will benefit from a range of advanced courses in Computer Science and Statistics offered by the University of Toronto, as well as from a sequence of three integrative courses designed especially for the program.

The Data Science Specialist program comprises three fundamental and highly-integrated aspects. First, students will acquire expertise in statistical reasoning, methods, and inference essential for any data analyst. Second, students will receive in-depth training in computer science: the design and analysis of algorithms and data structures for handling large amounts of data, and best practices in software design. Students will receive training in machine learning, which lies at the intersection of computer and statistical sciences. The third aspect is the application of computer science and statistics to produce analyses of complex, large-scale datasets, and the communication of

the results of these analyses; students will receive training in these areas by taking integrative courses that are designed specifically for the Data Science Specialist program. The courses involve experiential learning: students will be working with real large-scale datasets from the domain of business, government, and/or science. The successful student will combine their expertise in computer and statistical science to produce and communicate analyses of complex large-scale datasets.

Skills that graduates of the program will acquire include proficiency in statistical reasoning and computational thinking; data manipulation and exploration, visualization, and communication that are required for work as a data scientist; the ability to apply statistical methods to solve problems in the context of scientific research, business, and government; familiarity and experience with best practices in software development; and knowledge of current software infrastructure for handling large data sets. Graduates of the program will be able to demonstrate the ability to apply machine learning algorithms to large-scale datasets that arise in scientific research, government, and business; create appropriate data visualizations for complex datasets; identify and answer questions that involve applying statistical methods or machine learning algorithms to complex data, and communicating the results; present the results and limitations of a data analysis at an appropriate technical level for the intended audience.

### Enrolment Requirements:

This is a limited enrolment program. Students must have completed 4.0 credits and meet the requirements listed below to enrol.

### For students admitted to Arts & Science in the Year 1 Computer Science (CMP1) admission category:

## Specialist in Statistical Science: Methods and Practice (Science Program) - ASSPE2270

Statistical Science encompasses methods and tools for obtaining knowledge from data and for understanding the uncertainty associated with this knowledge. The purposes of the undergraduate programs are to: (1) equip students with a general framework for obtaining knowledge from data; (2) give students skills that they are able to flexibly apply to a variety of problems; and (3) to provide students with the ability to learn new methods as needs, data sources, and technology change.

The Specialist Program in Statistical Science: Methods and Practice is distinguished from the specialist program in Statistical Science: Theory and Methods through its emphasis on collaborative statistical practice and advanced exposure to an allied discipline. The program includes fundamental concepts in probability and statistical theory with mathematical prerequisites relevant to statistical practice. Students in the program acquire advanced expertise in statistical reasoning, methods, and computation, and complete a focus in another discipline that permits students to become conversant in that discipline to the extent that they can effectively collaborate. Students will also acquire advanced skills in communication, consultation and collaboration and an understanding of the role of mathematical thinking to support the development and evaluate the properties of statistical methods.

## About Courses in Statistical Sciences

The statistics course offerings are intended not only for students in statistics programs of study, but also to serve the needs of the many other disciplines that use statistical methods.

- The first-year seminar courses, STA197H1, STA198H1 and STA199H1, are designed to provide first-year students with the opportunity to work closely with an instructor in a small class setting. Note that these courses do not count toward a Statistics program of study.
- First year students wishing to enrol in a major or specialist program in the Department of Statistical Sciences must take STA130H1, which provides a broad introduction to statistical reasoning, data science, statistical computation and communication.
- The second year foundation courses (STA220H1, STA221H1, STA237H1, STA238H1, STA247H1, STA248H1, STA255H1, STA257H1, and STA261H1) are distinguished

## Statistical Sciences Courses

### STA130H1 - An Introduction to Statistical Reasoning and Data Science

Hours: 24L/24P

This course, intended for students considering a program in Statistical Sciences, discusses the crucial role played by statistical reasoning in solving challenging problems from natural science, social science, technology, health care, and public policy, using a combination of logical thinking, mathematics, computer simulation, and oral and written discussion and analysis.

**Corequisite:**

MAT135H1/MAT136H1/MAT137Y1/MAT157Y1. Strongly recommended:  
CSC108H1/CSC110Y1/CSC120H1/CSC148H1

primarily by their mathematical demands, as indicated by the prerequisites. Students interested in pursuing more advanced study in probability and theoretical statistics should take STA257H1 and STA261H1. They are the most mathematically rigorous of the 2nd year courses and provide the greatest flexibility when choosing upper-year courses. They are required by students in the specialist programs in Statistical Science: Theory and Methods and Data Science. Students in the specialist program in Statistical Science: Methods and Practice or in the major program in Statistics may instead choose STA237H1 and STA238H1. Students in computer science programs of study can take STA247H1 and STA248H1. The courses STA288H1, STA220H1 and STA221H1 provide training in statistical reasoning and methods for students in other programs of study, with STA288H1 particularly designed for students in life science programs. Students interested in completing a minor in statistics can combine STA220H1 with STA255H1, which will provide preparation in probability and statistical theory sufficient for many of the upper year courses in statistical methods.

- Pre- and co-requisites are designed to ensure that students have the appropriate preparation for their courses. They are strictly enforced. However, exceptions can be considered for students who have taken an equivalent course at another university. If you have taken courses that are exclusions to pre- or co-requisite courses, though, you should be aware that these are not always equivalent to the requisite courses and may not be allowed.

**Exclusion:** Any of STA220H1/ STA255H1/ STA238H1/ STA248H1/ STA261H1/ ECO220Y1/ ECO227Y1/ STAB22H3/ STA220H5/ STAB57H3/ STA258H5/ STA260H5/ ECO220Y5/ ECO227Y5/ STAA57H3 taken previously or concurrently

### STA197H1 - Thinking Better with Statistics

Hours: 24S

This course explores how our statistical intuitions and ways of thinking can let us down. There's no need to be a math whiz to be a better statistical thinker. Everyone can become a more critical consumer of claims presented in media, advertisements and by politicians—especially those relevant to our own health and wealth. This course

uses real-world examples and tours common and avoidable statistical traps and tricks. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Science

## STA198H1 - Probabilities Everywhere

**Hours:** 24S

This course examines the meaning and mathematics of probabilities, and how they arise in our everyday lives. Specific topics may include: the nature of coincidences, the concept of luck, games involving dice and cards, long run averages in casinos, margins of error in polls, the interpretation of medical studies, crime statistics, decision making, pseudorandomness, and Monte Carlo algorithms. Restricted to first-year students. Not eligible for CR/NCR option.

**Prerequisite:** Grade 12 Mathematics

**Distribution Requirements:** Science

**Breadth Requirements:** The Physical and Mathematical Universes (5)

## STA199H1 - Statistical Evidence: Truth or Myth?

**Hours:** 24S

This course explores the impact Statistics has made and continues to make on everyday life through science, law, and the modern methods for information processing. Statistical principles will be illustrated using examples from real life including business, romance and health. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Science

**Breadth Requirements:** The Physical and Mathematical Universes (5)

## STA201H1 - Why Numbers Matter

**Hours:** 36L

This course teaches non-science students the importance of quantitative reasoning to many different areas. ## Introduction

Trinity College offers Trinity One, a set of first-year courses, an independent studies program, and three interdisciplinary programs: Ethics, Society, and Law; Immunology; International Relations. The Major Program in Ethics, Society, and Law assembles courses offered by a variety of Departments and Colleges, including History, Philosophy, Political Science, Religion, Sociology, Woodsworth College and Trinity College. The Specialist and Major Programs in Immunology are assembled from offerings by the Departments of Biochemistry, Immunology, Molecular Genetics. The International Relations Program encompasses courses offered by the Departments of History, Political Science, Economics and Trinity College.

### The Margaret MacMillan Trinity One Program

Trinity One provides first-year students with the opportunity to explore together significant issues and ideas pertaining to the conduct of human life and world affairs. Trinity One has six streams, each linked to a prominent aspect of the College's intellectual identity: Policy, Philosophy, & Economics; Ethics, Society, & Law; International Relations; Medicine & Global Health; Biomedical Health; and Environment & Sustainability. Each stream includes two seminar courses limited to 25 students. These courses foster small-group discussion and emphasize the development of critical-thinking, oral-presentation, writing and research skills. Co-curricular events enable students in the streams of Trinity One to hear guest speakers and to engage in informal conversation with one another and with their professors. Please see the Trinity One [webpages](#).

### Ethics, Society, and Law

The Ethics, Society and Law program allows undergraduates to explore some of the most crucial questions facing contemporary society, and to do so by means of an explicitly interdisciplinary approach. The humanities, social sciences and natural sciences all provide useful lenses for study and distinctive skill sets. Students are required to cover core areas in each of the streams; they additionally select their own areas of focus from optional courses in fields like philosophy, religion, anthropology, women and gender studies, economics, geography, political science, sociology and criminology. Engaging across disciplines, E, S and L majors acquire a strong critical preparation for well-informed, effective analysis and action, which will serve them professionally,

locally and as members of the global community. Please see the ES&L [webpages](#).

### International Relations

The study of international relations dates back to antiquity and remains one of the most vital disciplines in the academic community. Its purpose is to explore the enduring questions of the origins of war and the maintenance of peace, prosperity, sustainability and well-being, the nature and exercise of power within the international system, and the changing character of the participants and process and outcomes in international decision-making.

Drawing on the strengths of faculty members in History, Political Science, Economics and related disciplines, the International Relations program offers a structured and interdisciplinary education. The program provides students with knowledge of the historical and contemporary dimensions of the international system while introducing them to the methodologies employed in historical, political, economic and social scientific analysis.

The International Relations Specialist and Major are limited enrolment programs. For more information, please consult the [International Relations Program webpages](#).

### Immunology Studies

For more information please see the entry under [Immunology](#) or the [Immunology departmental website](#).

### Independent Studies

The Trinity College Independent Studies Program is open to students of all colleges. Only full-time students are eligible to apply. The program allows you to undertake extensive research into a topic that interests you, and is an especially suitable way of doing interdisciplinary work on subjects that are not directly part of the present university curriculum. Enrolment is open until the end of the first week of the semester in which the course will begin.

Participation in the program is restricted to students who have completed at least 10.0 credits and have maintained a CGPA of at least 3.50. Students applying to the Trinity Program must already have the agreement of a full-time faculty member of the University to act as supervisor for either a half course or a full year Independent Study course. The maximum number of independent studies half courses for which a student may receive credit is one, and the maximum number of independent studies full course equivalents for which a student may receive credit is two, typically one credit in third year and one credit in fourth year. Permission to undertake Trinity independent studies projects for the equivalent of two full courses will normally be granted only to students with a cumulative GPA of at

least 3.70. Your proposal must be approved by your supervisor and accepted by the director of the program, Dr. Gillian Gillison.

Course numbers are as follows: Students enrolling for the first time register for one or more of [TRN300H1](#), [TRN301Y1](#), [TRN302Y1](#) (third year), or for one or more of [TRN400H1](#), [TRN404Y1](#), [TRN405Y1](#) (fourth year), as appropriate. Those enrolling for a second time register in one of [TRN400H1](#), [TRN404Y1](#), and [TRN405Y1](#), as appropriate. Enrolment in third year TRN independent studies courses is not a prerequisite for fourth year TRN independent studies courses but students who initially enrol in fourth year TRN independent studies courses may not subsequently enrol in third year TRN independent studies courses.

Students are enrolled in TRN independent studies courses by the Dean of Arts' office at Trinity College. Students should complete the enrolment approval process in enough time to be enrolled no later than the end of the first week of classes in the relevant term.

Please note that a TRN independent studies course is not a "directed reading" course. The expectation is that students should do original research and provide a report of this research as part of their evaluation.

Students are required to identify a second reader for their final reports, in addition to their direct supervisor, whose evaluation of the paper will form part of their final grade for the course. The second reader should also be a Faculty member.

Students are required to file a graded progress report with the director of the program, Dr. Gillian Gillison, no later than two weeks before the last date for dropping the course without academic penalty. All work including final reports must be submitted on or before the last day of classes. The supervisor and second reader will then grade the report and copies of the final essay or report, one graded by the supervisor and one independently graded by the second reader must be emailed to the Director within one week of the last day of classes.

For more information, please see the Independent Studies [webpage](#) or consult the director, Dr. Gillian Gillison.

## International Relations Major (Arts Program) - ASMAJ1469

The study of international relations dates back to antiquity and remains one of the most vital disciplines in the academic community. Its purpose is to explore the enduring questions of the origins of war and the maintenance of peace, the nature and exercise of power within an international system, and the changing character of the participants in international decision-making.

Drawing on the strengths of faculty members in History, Economics, and Political Science, the International Relations Specialist Program offers a structured and interdisciplinary education. The program provides students with knowledge of the historical and contemporary dimensions of the international system while introducing them to the methodologies employed in historical, political and economic analysis.

### Enrolment Requirements:

What impact do they have on social and political life? This course explores religious and cultural responses to human tragedy and cultural shock. ## Trinity College Courses

### Trinity College First-Year Foundations

#### TRN191H1 - Disaster and Terrorism: Religion and Ethics at Ground Zero

Hours: 24S

Hurricane Katrina, the Japanese experiences of Hiroshima and Fukushima, 9/11, and more recent examples of terrorism and disaster. Attention will be given to concerns such as the impact of trauma on social and political debate, the function of religious discourse in the face of tragedy, the nature of ideology, and the relationship between religion and violence. A thematic concern throughout the course will be the nature of ethical commitment in the midst of confusion and social disruption. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Thought, Belief and Behaviour (2)

## TRN192H1 - Public Health in Canada: Health for the 21st Century

**Hours:** 24L

This course deals with preventive care and population health. It will also move into new areas like healthcare and the environment (climate change) and the greening of healthcare. It will look at health as an extension of democracy – of how health extends individual rights beyond the political realm to the social realm, of how it can build social capital and knit populations together. It will look at areas inimical to health, ‘detriments to health’ and how economic inequality can lead to health inequality. Along with this it will look at ways of empowering the individual, the public as agent and a role of public engagement by major institutions. It will also push beyond the popular determinants of health to engage students in a paradigm on next steps, the future challenges in population health. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Social Science

**Breadth Requirements:** Society and its Institutions (3)

## TRN193H1 - Canadian Health Policy: Past, Present and Future

**Hours:** 24L

This is a health systems course. It deals with illness care, individual health, and health insurance. It will take a comparative and historical approach. We will look at the genesis of Canadian healthcare, our benefits and those other countries provide (e.g., pharmacare, dental care). We will look at indirect contributors like childcare and basic income. We will examine the public-private debate. We will also take some novel approaches. One is that the university has an expanded role in the 21st century, one that involves public outreach, a role that includes healthcare. Recent academic literature on healthcare

notes that it is nation-building. We will look at why. We will examine some cutting-edge ideas, like integrated care, the learning health system, the concept of customer-owners. We will explore whether our healthcare system needs to be anchored by ‘institutions of excellence’ and identify these. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Social Science

**Breadth Requirements:** Society and its Institutions (3)

## TRN194H1 - Literature and Wicked Problems

**Hours:** 24L

This course explores contemporary literature in relation to the interdisciplinary framework of “wicked problems.” Research emphasizes that complex, entrenched problems, like government relations with Indigenous peoples or human impacts on the climate, involve interconnected systems and require approaches that cross disciplines and types of knowledge. The course examines the role of literary works (mostly 21st-century fiction) in addressing these issues of pressing concern to students as global citizens. Critical thinking, scholarly reading and database research are foundational skills that this course strengthens in order to prepare students for their writing in disciplines across the university. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Creative and Cultural Representations (1)

## TRN195H1 - The Literature of Heroes and Horrors

**Hours:** 24L

This course explores contemporary literary works that redefine heroism in light of personal and cultural trauma. What does recent literature (mostly 21st-century fiction) show us about the nature of heroism in our time? To answer this question, the course examines theories of psychological trauma, studies in the field of positive psychology, and research on gothic and dystopian literature. Critical thinking, scholarly reading and database research are foundational skills that the course strengthens in order to prepare students for their writing in disciplines across the university. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Creative and Cultural Representations (1)

## TRN196H1 - Joy and Resistance in Diverse Storytelling

**Hours:** 24L

"Can we speak about joy for once?" In contemporary literature from Black, Indigenous and People of Colour (BIPOC) authors across Canada and Turtle Island, there is a resurgence in diasporic stories that capture the joy and resistance of carving space for community against the mechanisms of the state. This course explores how BIPOC literature has intersected with social problems and activist movements, creating spaces for readers to reflect on their own lived experiences. Students will expand their creative thinking, critical reading and scholarly writing skills through multi-modal assignments that offer connections to current issues and community knowledge. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Creative and Cultural Representations (1)

## TRN197H1 - In the Shadow of the Vikings: Depictions of the Early Norse in Medieval, Modern, and Post-Modern Culture

**Hours:** 24L

Although rarely attested during the historical era when they were active, since the early nineteenth century the word "Viking" has been popularly applied to describe groups of Scandinavian adventurers who marauded along the frontiers of Medieval Europe: in this respect, the image of "the Viking" may be regarded as much a modern, as it is a medieval, creation. The legacy of historical "Viking activities" was a factor in the development of modern nation states in Scandinavia and the Baltic region, and their contributions to the heritage of people residing in Britain, continental Europe, the Middle East, and even the Atlantic coast of Canada have been and continue to be cited to the present day. Aspects of culture attributed to "the Vikings"—their assumed independence, courage, resourcefulness, and tenacity in the face of adversity, as well as the occult characteristics of their cosmology—have, for better and worse, inspired modern artists, writers, composers, intellectuals, explorers and even political leaders, and persist in present day literature, art, music, sport and popular culture as well. Why and how do elements of historic Viking culture continue to evoke traditions and characteristics popularly attributed to "the Vikings"? What are some implications of "Viking-ness" for those people in the post-Viking Age past and/or present who we may regard—or may regard themselves—as the "cultural descendants" of the Vikings? In this seminar, participants will study selected cultural artifacts of the

"post-Viking Age," along with recent multidisciplinary research, to observe how various "post-Viking Age" cultures and subcultures have selectively appropriated elements of the "Viking" past. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Creative and Cultural Representations (1)

## TRN198H1 - The Viking Phenomenon: Commerce, Conflict, and Communication along Europe's Frontiers, 7th – 15th Century

**Hours:** 24L

Perspectives on the impact that the Scandinavian raiders and traders popularly referred to as "Vikings" had on European and World history continue to develop as the work of historians, archaeologists, linguists, and scientists expands our understanding of the past. Recent research has revised the traditional view of the "Vikings" as primarily marauding warriors; in its place, a more complex and nuanced conception of the implications that "Viking activity" had on the social, economic, and political development of the peoples with whom they came in contact has emerged. This seminar will consider the relationship between the traditional conception of the "Viking warrior" and recent research that suggests the broader impact that the "Viking Phenomenon" had upon the economic revival and sociopolitical development of medieval Europe and its frontiers. In the course of the seminar, we will examine a selection of historical records and information concerning artifacts of the material culture of "The Viking Age" in order to better understand the activities of early medieval "Vikings," not only as warriors, but also as agents of commerce, explorers, pioneers, and rulers. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities

**Breadth Requirements:** Creative and Cultural Representations (1)

## TRN199H1 - Classical Social and Political Thought from the 18th Century Enlightenment to the 20th Century

**Hours:** 24L

In the first part of the course, via lectures and readings, we will be examining the Enlightenment, the French and Industrial Revolutions, and the Romantic Conservative Reaction to these revolutions. In part two of the course, we will study Karl Marx, who coined the term "capitalism"

to describe the new type of society that had emerged as a product of the Industrial Revolution. Marx, as the severest critic of the capitalist system, called attention to its alienating character. In the 19th Century, his ideas provoked a response that accounts, in large measure, for the character of Western political thought. The discussion of Marx is therefore followed by the intense debate with his "ghost," the Marxian legacy. We will engage with the participants in the debate - - Weber, Pareto, Mosca, Michels, Durkheim, and Mannheim. Restricted to first-year students. Not eligible for CR/NCR option.

**Distribution Requirements:** Humanities, Social Science

Can the immune system be strengthened? Are some diseases incurable? What is the best way to stop the spread of a virus? This course examines the scientific principles underlying contemporary issues in the science of human health with the goal of exposing students to the current state of biomedical research. We will develop three distinct types of understanding that are essential to literacy about the science of human health: the basic concepts in science; the nature of scientific research; and the rules that govern how scientists do their work. This course will explore topics such as stem cells, gene editing, regenerative medicine, vaccination, drug development, and personalized medicine. Restricted to first-year students admitted to the [Trinity One Program](#). Not eligible for CR/NCR option.

understanding of the human genome. We will study a number of recent cases in order to explore how scientific findings influence decision-making in hospitals and the selection of social policies. We will also discuss the background forces that shape medical research and how this affects the kinds of health problems that are prioritized. The objective of this course is to develop a solid understanding of biological concepts related to human health and consider them in their wider social and ethical contexts. **Hours:** 48S

In this course we consider when our health policies support the highest standards of medical care, consistent with the latest discoveries in medical research. We examine the ways in which debates around ethics, effectiveness and efficiency shape global and national health policy. We then assess Canada's experience in providing health care, identifying lessons for national policy reform and for Canada's role as a leader in global health research and policy. We explore a range of health challenges including universal health care, anti-microbial drug resistance, HIV AIDS, tuberculosis, reproductive, maternal, newborn and child health, cardiovascular care, oncology, environmental health, indigenous health, violence against women and mental health. ## Introduction

University College offers a number of programs and courses outside the areas traditionally covered by departments. These include UC One and programs and courses in Asian Canadian Studies, Canadian Studies, Cognitive Science, Drama, Health Studies, and Sexual Diversity Studies, in addition to First-Year Foundation Seminars. The overall aims of the College Programs are to foster interdisciplinary work in significant areas of study and to encourage intellectual breadth. Many program courses are open to students not enrolled in the programs themselves.

### UC One: Engaging Toronto

UC One is an exciting initiative that provides first-year students with a special university experience. Students choose from one of four courses, each of which is designed to engage with the city from a different perspective. Classroom learning is directly linked to real life experience.

UC One is a 0.5 credit course, one of four courses typically taken by a first-year Faculty of Arts and Science student. Enrolment in each course is limited to up to 30 students. Students enrol in one of the following four 0.5 credit courses:

- [UNI101H1](#): Citizenship in the Canadian City

- [UNI102H1](#): Performing the City I
- [UNI103H1](#): Gradients of Health in an Urban Mosaic
- [UNI104H1](#): Sex in the City

In UC One, you can choose a stream that complements your own interests.

Weekly lectures and seminars will be supplemented with prominent guest speakers, including political and business leaders, activists from non-governmental organizations, theatre directors, artists, and health practitioners. Students will have the opportunity to meet with the speakers and socialize with their fellow students after each guest lecture. Students will also participate in a range of field trips across the city.

Students enrol to the specific section during the Enrolment period. All first-year students in the Faculty of Arts and Science (St. George campus) are eligible to enrol. Those participating in other One programs are excluded from UC One.

For more information visit the UC One website at: <https://www.uc.utoronto.ca/programs-study-first-year-program-uc-one>.

### The Asian Canadian Studies program (Minor)

The minor in Asian Canadian Studies program focuses on community-engaged learning that explores how to understand the historical, social, cultural, economic, and political forces that affect people of Asian heritage in Canada. Our interdisciplinary courses connect students with local communities, and every course provides opportunities for students to pursue a choice of research interests. Together we critically investigate and add to knowledge about Asian Canadians.

### The Canadian Studies Program (Specialist, Major, Minor)

The Canadian Studies program offers opportunities to study contemporary Canada in an interdisciplinary manner and to explore cultural, social, economical and political developments in this complex and diverse country. Students are encouraged to consider additional courses in Indigenous Studies in completing the requirements of the Program.

### The Certificate in Black Canadian Studies

The Certificate in Black Canadian Studies will provide students with an opportunity to study and research the social construction of race in Canada, with a focus on Black Canada and Black Canadians, past and present. This will include attending to structural and systemic discrimination in areas including politics, judicial systems, and the arts, as well as considering counter-narratives and forms of resistance and empowerment enacted by Black Canadian communities. This certificate also offers a specialization that considers the historical roots and

contemporary implications of anti-Black racism, as well as movements that are building towards social equity, and future imaginings. While this certificate addresses local and national contexts, it also situates diasporic and transnational frameworks for understanding Blackness in Canada. As a result, the certificate also examines a comparative approach to meaning-making and belonging in solidarity with other forms of racism and oppression.

### **The Cognitive Science Program (Major)**

The Cognitive Science Program introduces students to the field of cognitive science: the interdisciplinary study of mind in humans and machines. Our students gain an understanding of such mental phenomena as perception, language, reasoning, and consciousness, and they integrate this understanding with an account of how the human brain works.

The Cognitive Science Arts Major has three course streams: Perception and Attention; Thinking and Reasoning; and Language and Cognition. The Cognitive Science Science Major has two streams: Computational Cognition and Cognition and the Brain. Courses include: [COG250Y1](#) Introduction to Cognitive Science; [COG341H1](#) and [COG342H1](#) Issues in Cognitive Science; [COG401H1](#), [COG402H1](#), and [COG403H1](#) Seminar in Cognitive Science; [COG498H1/COG499H1](#) Independent Study; as well as courses drawn from offerings in Computer Science, Linguistics, Philosophy, and Psychology.

### **The Centre for Drama, Theatre & Performance Studies (Specialist, Major, Minor)**

The Centre for Drama, Theatre & Performance Studies is described elsewhere in this Calendar under Drama.

### **The Health Studies Program (Specialist, Major)**

The Health Studies Program focuses on many areas of study that surround, interact with and support bio-medical research and clinical activity in regard to health, including health policy, practices, research methods, and socio-cultural expression. The Major serves as a general introduction; the Specialist provides a more intense research focus with more methodological emphasis.

### **The Sexual Diversity Studies Program (Specialist, Major, Minor)**

The Sexual Diversity Studies Program allows students to focus on questions of sexual identity, difference, and dissidence across disciplinary lines and cultural frameworks. By examining sexual diversity across time and place, students will learn about the ways different cultures have separated the sexual from the nonsexual, the normal from the abnormal, and what the regulation of sexuality can tell us about how power operates along the lines of gender and race, for example. Students will gain an understanding of how and why certain sexual practices

have come under scrutiny, and the significance of the various labels and identities that we have attached to them.

University College (UNI) and Drama (DRM) courses are staffed by a combination of specific program staff members and members of various University departments, and are open to all students at the University. Further information on University College Independent Study courses is available at <https://www.uc.utoronto.ca/programs-study-academic-programs-independent-study>. Further information on DRM is available at <https://www.cdtps.utoronto.ca/>.

### **Asian Canadian Studies Minor (Arts Program) - ASMIN2728**

The Minor in Asian Canadian Studies focuses on community-engaged learning that explores how to understand the historical, social, cultural, economic, and political forces that affect people of Asian heritage in Canada. Our interdisciplinary courses connect students with local communities, and every course provides opportunities for students to pursue a choice of research interests. Together we critically investigate and add to knowledge about Asian Canadians.

The category "Asian Canadian" is widely understood to refer to people in Canada of East Asian, South Asian, Southeast Asian, and West Asian ancestry.

Students take two required 0.5 credit core courses in Asian Canadian Studies; select from an array of courses in Asian Canadian Studies; and take additional courses related to the larger contexts of Asian Canadian Studies. The Minor in Asian Canadian Studies is easily combined with other disciplines, such as Anthropology, Art, Economics, English, Geography, History, Political Science and Sociology, as well as with interdisciplinary studies such as Contemporary Asian Studies, Diaspora and Transnational Studies, Equity Studies, East Asian Studies, South Asian Studies, and Near Eastern Studies.

Students will be encouraged to take full advantage of the opportunities available through the Canadian Studies Program, including its journal, *ImagiNATIONS*, produced by and for undergraduate students and its annual undergraduate student conference. The Canadian Studies Student Union is a focal point for social as well as academic pursuits, and is open to students pursuing a Minor in Asian Canadian Studies. Students also can participate in Asian Canadian Studies student events and in the tri-campus Asian Canadian Studies Research network. The Research network brings together professors and students to discuss current research related to Asian Canadian Studies, Asian diasporas, and global Asian migrations. Students in the minor are also invited to participate in the Asian Institute's Asian Pathways Research Lab that offers research opportunities in Toronto.

## Introduction

Victoria College (Vic) is committed to providing students with a personal and inclusive university experience inside and outside the classroom. This is an environment where students and faculty are engaged in building a community that welcomes diversity, embraces creativity, and is energized by challenge.

At Vic, we nurture a close-knit learning environment from the very beginning of your academic career. Whether it is through our Vic One program, Vic One Hundred or other First-Year Foundation (FYF) courses offered by the Faculty of Arts and Science, every first-year Victoria College student takes at least one small seminar course. You will experience here the academic advantages of being a student at one of Canada's leading research universities combined with the intimacy of a small liberal arts college.

More information is found on the [Victoria College website](#).

## Vic One

Victoria College offers first-year Arts and Science students an opportunity for a unique educational experience that draws upon the College's history and identity. Eight streams with differing emphases are available in this foundation year program, known as Vic One. The eight streams feature lively seminars and dialogue, and are enriched by weekly plenary sessions with guest professors, visiting artists, writers, ambassadors and other public figures.

Two required courses in each stream are seminar courses given by faculty of Victoria College. They have a limited enrolment of 25 students in each class. A third co-requisite course is listed with each course description. Students who have questions about their Vic One co-requisite course must contact the Vic One Liaison Officer at [vic.one@utoronto.ca](mailto:vic.one@utoronto.ca).

Vic One enrolment requires an application that is found on the Vic One website ([www.vic.utoronto.ca](http://www.vic.utoronto.ca)). All first-year

students in the Faculty of Arts and Science (St. George campus), regardless of college membership, are eligible for admission to Vic One. Admission decisions are based on extra-curricular activities, a short original essay and the student's entering grades.

PLEASE NOTE: Vic One students are NOT eligible to enrol in Vic One Hundred courses, First-Year Foundations seminars or any other One program.

## Vic One Hundred: First Year Seminars

Vic One Hundred is a Victoria College initiative that offers first-year Arts and Science students the opportunity to experience a small class environment. These limited enrolment courses facilitate close contact with distinguished teaching faculty and fellow students, while providing an excellent gateway to, and foundation for, subsequent studies.

## Combined Degree Programs (CDP) offered with Ontario Institute for Studies in Education (OISE)

- Combined Degree Program in HBA/HBSc and Master of Teaching (MT)
- Combined Degree Program (CDP) in Education and Society, HBA/HBSc and Master of Arts, Child Study and Education (MA-CSE) (Victoria College and OISE)

Students enrolled in the Minor in Education and Society may apply for one of these Combined Degree Programs. For details about application and program requirements, see the [Combined Degree Programs section](#).

## Creative Expression and Society Program

The Minor in Creative Expression and Society allows students to develop creative and communicative proficiency by taking part in one or more workshop-style courses in fiction, non-fiction, drama or poetry writing and/or creative expression through aural and visual media. Students will also explore the reciprocal relationship of the creative arts and society by studying social issues in the arts, the influence of writers and artists on society, and the impact of society and the marketplace on creative endeavours. Courses explore such topics as the arts and public opinion; reception and interpretation; marketing and reviewing; censorship and criticism; ethics and accountability. This program fosters the exercise of creativity while making the relationship of creative expression and social conditions a subject for reflection and dialogue.

## Education and Society Program

The Vic-sponsored Education and Society Minor is open to all Arts and Science students. This program is for those who are interested in education policy, the sociology of education, and teaching as a skill that is relevant to many careers. The Minor program provides strong background for admission to a teacher education program and is required for admission to the Combined Degree Programs with OISE (separate application required, see above).

## Literature and Critical Theory Program

The Literature and Critical Theory program is based on a pair of ideas. The first is that many of the most important issues that engage our attention call for a multidisciplinary approach. The second is that the kind of critical analysis demanded by the study of literary texts offers powerful tools for investigating other cultural and social forms, both past and present. Central to the program is the comparative study of forms of representation – texts, media, institutions, and theories — in diverse cultures and historical periods. This requires thinking seriously about what it means to compare and what it means to translate.

The Literature and Critical Theory program will attract students who are interested in exploring and generating links between literature and historical, cultural, political, social, and psychological forces. The program trains students to think about how problems of the present are tied to those of the past, and to consider critically how we both represent this past and imagine possible futures. Students will be engaged in the practice of close, contextualized analyses of literary texts and other discursive forms, including artefacts, institutions and social practices, originating in different languages, geographical locations, and historical periods.

Literary production, like all forms of cultural production, invariably exceeds the boundaries of the nation, and increasingly so in today's globalized world. The boundaries between various cultural media are similarly porous, and the aesthetic values by which we identify, judge, and classify literary and cultural objects are historically shaped. For these reasons, students will be encouraged to study in more than one language and to work with a variety of media. Our courses explore literary and cultural movements across languages, geographical regions, epochs, media, and disciplines.

## Material Culture and Semiotics Program

What does it mean to live in a "material world"? What might we learn from studying the signs that surround us? In an increasingly consumer-oriented, globalized and digital age, how do objects and signs express the longstanding beliefs and values of different societies? The Minor in Material Culture and Semiotics is a unique, future-oriented program of study that combines the study of objects such as clothing, household goods, machinery,

and built forms with semiotics – the science of signs, sense-making, and cultural interpretation. Courses examine the meanings people invest in their things, across cultures and time periods, and consider processes of production, consumption, invention, exchange, use, re-use, divestment, disposal, collection, and exhibition. Material Culture and Semiotics thus offers an interdisciplinary space in which to understand contemporary and emerging society through engagement with historical and theoretical perspectives on human behaviour and meaning-making. Students have the opportunity to participate in an internship course with a placement in museums, archives, cultural institutions, or creative design and advertising-oriented businesses. The Minor is designed to complement programs in such disciplines as Anthropology, Art History, History, Book and Media Studies, and History of Science and Technology and to prepare students for careers in such fields as marketing and advertising, museums and cultural institutions, communications, journalism, and education.

## Renaissance Studies Program

The Renaissance Studies Program lets you study one of the most critical periods in European and world history. Changes in art and literature, in social and political development, and in technology and science transformed European concepts of the individual, society, and the world.

Many aspects of our modern world had their origin in this period: our emphasis on the study of human affairs; our irrepressible interest in the exploration of the universe, in science, and in medicine; the institutions of church and state as we know them today. The Renaissance is also a period of unparalleled European contacts with non-European civilizations – from the powerful Islamic world of the Near East and North Africa to the great pre-Columbian civilizations of the Americas, from the uncharted forests of equatorial Africa to the exotic lands of the Indian subcontinent and the Far East, nothing seemed too distant or too inaccessible for the European mind or merchant.

This interdisciplinary program is particularly attractive to students of history, politics, literature, fine art, history of science, music and theatre, because it assembles aspects of all these studies to focus on one seminal period in Western civilization.

## Science, Technology, and Society Program

The influence of scientific research and its applications is evident in virtually all aspects of modern life, from our conception of societal obligation and familial relations, to our interaction with the commonplace materials and objects we use to sustain ourselves. However, scientific and technological development is in turn affected by and

shaped by politics, public opinion, moral beliefs and cultural practices.

Courses in this program explore topics such as ethical uses of technology, scientific revolutions and controversies, science-related policy and politics, modeling and communication of scientific research, and knowledge transfer from research to commercial and societal applications.

The Minor in Science, Technology, and Society is an interdisciplinary program that focuses on the different ways science and technology shape modern society and, in turn, how society shapes science and technology. From the food we eat to the way we conceive family relations or our obligations to future generations, our daily practices and our beliefs are increasingly influenced by scientific research and its applications. A study of Montaigne as a multifaceted historical and cultural figure, as a mirror to sixteenth-century history, as product and observer of the religious divisions, political transformations, and cultural evolutions in an age marked

by religious war, the growth of the state, the advent of the printed book, and the dissemination of the humanist project across western Europe. The course examines Montaigne's essays, travel journals, and important scholarly works on Montaigne, in the context of contemporary gender relations, colonial empire, religious belief, and early modern Europe's complex relationship with Greco-Roman Antiquity.

### VIC245H1 - Science Wars: Society and the Limits of Scientific Knowledge

**Hours:** 24L

An introduction to competing conceptions of scientific knowledge and the role of sociocultural factors in shaping scientific methods, theories, and evidence. Can science provide objective knowledge of the external mind-independent world, or are the empirical aspirations of science limited by the social, cultural, economic, political, and religious contexts that shape "science" itself? Can scientific knowledge reach certainty? How do sociocultural factors affect the process of theory acceptance? This course considers "science" as an epistemological battleground from 17th century debates on inductive reasoning to contemporary arguments about "alternative" science.

## Introduction

For nearly five decades, we have trained students to think deeply about how gender and sexuality operate at individual, interpersonal, institutional and global levels. We are an interdisciplinary program with faculty expertise across a range of fields, including history and literature, sociology and law, cultural studies and queer theory, and African, Caribbean, Middle Eastern, East Asian, and Equity studies. We enable students to answer urgent and complex questions, such as how militarization can constrict men's aspirations for their lives, why pay gaps exist, how sexual expression is scripted and can be re-scripted, and even what Lizzo might have in common with Shakespeare. In addition to training students to analyze a music video, a novel, and a government report with equal care and skill, we also focus attention on matters of scale:

when to aggregate and when to parse significant distinctions; how to think comparatively across space and time.

The Women & Gender Studies Institute (WGSi) at the University of Toronto is distinctive for its transnational approach. We critically address how national borders and nationalist discourses frame constructions of gender, race, class, indigeneity, sexuality, ability, and other important differences. We study the effects of migration, diaspora, and displacement on experiences of home and heritage, family, desire, and selfhood. We provide students the conceptual tools to connect processes of imperialism and globalization with emergent economies and forms of labour and consumption. Finally, we encourage students to reflect on the varied histories of feminism when framing their own activism in the present.

Our graduates go on to do innovative work in the public service, creative, and corporate sectors, and some enter the academy. They become everything from documentary filmmakers to grassroots activists to policy analysts in economic development agencies and professors in leading universities. All of them draw on the critical lenses they develop in this program, becoming part of a rich community of graduates who maintain their connections with one another, and who come back to the diverse classrooms where they once were students to share their experiences.

## Introduction

Woodsworth College is named in honour of James Shaver Woodsworth (1874-1942), minister, pacifist, social activist and Member of Parliament, who was strongly committed to broadening educational opportunities for all. The College remains faithful to its mission of promoting accessibility and equity, providing two access programs for students seeking admission to the Faculty of Arts and Science: the Millie Rotman Shime Academic Bridging Program and the Diploma to Degree Transfer Program. In addition, Woodsworth offers rewarding educational experiences through its distinctive College One programs, a selection of First-Year Foundation courses, and the Summer Abroad programs. The Minor program in Digital Humanities prepares students for future paths ranging from graduate studies in literature, history, library science, and other fields, to careers as technical writers, data analysts and visualizers, project managers, and programmers. Regardless of College affiliation, you are encouraged to explore the exceptional range of programs offered by [Woodsworth College](http://www.wdw.utoronto.ca).

### Digital Humanities (Minor program)

Digital humanities (DH) is a discipline at the intersections of the humanities with computing. DH studies human culture -- art, literature, history, geography, religion -- through computational tools and methodologies; and, in turn, DH studies the digital through humanist lenses. Digital humanists study social media phenomena or medieval manuscript archives; computationally analyze thousands of newspaper articles to trace economic developments; construct video games to study literary narratives; or resurrect historical cities through digital maps and virtual reality exhibits.

In introductory and advanced DH courses, students learn about the intellectual landscape of digital humanities scholarship. They learn how to build digital stories, exhibits, and maps; how to digitize rare books; how to analyze collections of data; how to construct digital models and 3D-print them; and how to manage major digital projects. By the end of the program, students conduct a major DH research project of their own or participate in the research of an established faculty project. Throughout the program, students gain a critical perspective on digital technologies, learning to consider the ways digital platforms shape, and are shaped by, the currents of wider social and cultural forces. By providing this critical and technical skillset, the Digital Humanities Minor prepares students for future paths that range from graduate studies in literature, history, library science, education, or computer science, to careers as technical writers, data analysts and visualizers, project managers, or programmers.

### First-Year Foundation Options

Woodsworth College offers two kinds of First Year Foundation options: individual FYF H seminars on a variety of topics, and our College One, in two streams that consist of two H seminars each, for students interested in a deeper level of engagement in this part of their first-year experience. All our First Year Foundation seminars offer an intellectually challenging introduction to university-level studies and are designed to complement other first-year courses, thereby enhancing academic success in the first year and beyond. They promote the development of strong critical thinking, information literacy, oral and written communication skills, and awareness of both the distinctive nature of particular academic disciplines and the practices and values common to all academic work.

### FYF Seminars

Woodsworth's FYF seminars, all of which are stand-alone H courses, are designed to provide first-year students with the opportunity to work closely with an instructor and

fellow students in a class of no more than 25, maximizing opportunities for class discussion and the development of essential academic skills. Each seminar focuses on specific disciplinary or interdisciplinary issues, questions or controversies of particular interest to the instructor, and introduces the students to the excitement of discovery inherent in academic research and scholarship at the University of Toronto. Wide-ranging readings and assignments encourage students to develop their ability to think critically and to express ideas and arguments clearly and coherently, both orally and in writing. Please check the [timetable](#) for Woodsworth College's current offerings of FYF seminars.

### Woodsworth One

Woodsworth One has two interdisciplinary streams, both of which draw on a wide range of Social Sciences and Humanities perspectives. The Order and Disorder stream focuses on the role of laws, government policies, trade, war, and innovation in creating and disrupting both social and global order. The Popular Culture Today stream examines the products of the entertainment industry and the social behaviours associated with their consumption, exploring how popular culture works and what it means.

Students take two 0.5 credit seminars – one in each term – and participate in regular co-curricular activities that build students' sense of community within Woodsworth College and across the University of Toronto. Seminars are capped at 25 students to maximize opportunities for participation and to promote close contact with both the instructor and fellow students. The emphasis is on class discussion and problem-based learning. Students participate in role-playing games, simulations, debates and more. The co-curricular activities include field trips, film screenings, guest speakers, writing and research workshops, and test-taking seminars.

The Woodsworth One team is dedicated to supporting students' transition to university life, and to guiding their academic planning. In addition to the Program Coordinator, course instructors, and peer mentors, the team includes the College Writing Centre, the College Learning Strategist, a dedicated Registrar, and a program administrator. Each member of the team seeks to create a strong sense of community and to set students up for academic success.

Woodsworth One is geared towards first-year students enrolled in Social Sciences and Humanities within the Faculty of Arts and Sciences. In keeping with Woodsworth College's tradition of open access, there is no incoming grade requirement. Students participating in any other One program are excluded from Woodsworth One. Please note that both streams may not be offered in a given year. For more information please check the timetable for current course options.

### Summer Abroad Programs

Students can prepare themselves for a future in the global village by participating in a Summer Abroad program and complete a University of Toronto course overseas in three to six weeks. These programs are designed to enrich students' academic lives by providing an exciting and educational international experience. Learning is not limited to the classroom; students will observe and experience many of the things they study, including the language, history, culture, art, religion, business, and politics of the host country.

### Millie Rotman Shime Academic Bridging Program

The Academic Bridging Program is designed for individuals who have been away from formal education for some time and do not meet the University's established requirements for direct entry admission. Both part-time and full-time options are available to students interested in studies in the Humanities and Social Sciences. Those seeking admission to the Sciences must take the program's full-time science option. Students who successfully complete the program with a grade of 63% or above are admitted to the Faculty of Arts and Science with one full credit towards their degree. Students who complete either of the program's full-time options may transfer up to 2.0 credits towards their degree.

### Diploma to Degree

The Diploma to Degree program is a pathway to university studies for students completing a two-year liberal arts diploma at one of our partner institutions, including George Brown College, Humber College and Seneca College. The Diploma to Degree Program is a facilitated transfer program into Woodsworth College in the Faculty of Arts and Science at the University of Toronto. The program is designed for students to transfer with up to 6 transfer credits and retained credits from courses completed at the University of Toronto.

To be eligible for transfer, students must:

- Complete the 2-year diploma with a minimum 3.0 GPA
- Receive a recommendation from their college

# Writing in the Faculty of Arts & Science

The ability to think critically and to write well-organized, clear, grammatical prose is important to your work in Arts and Science courses. It will also improve your chances if you apply to graduate or professional schools and will give you an advantage in the workplace. To help you develop your writing skills, Arts and Science provides a range of instructional resources.

NOTE: For courses in creative writing, see entries under “[English](#)” (ENG), “[Innis College](#)” (WRR), and “[Victoria College](#)” (CRE) in this Calendar.

## Courses

Departments and programs integrate writing instruction into many of their courses, and some offer courses that concentrate on communication in their disciplines. Check the course listings by department.

Your course instructors and teaching assistants will provide guidelines for written assignments. They will often offer instruction in class and give you the opportunity to ask questions before assignments are due. You may ask them to discuss work that has been graded and returned to you.

In addition, the university offers several courses in writing effective essays:

- [ENG100H1](#) (Effective Writing) is listed under “English” in this Calendar
- [WRR103H1](#) (Writing Essays) is listed under “Innis College”
- [JWE206H1](#) (Writing English Essays) is listed under “English” and “Innis College”

Innis College’s Minor Program in [Writing and Rhetoric](#) offers an array of courses that explore the worlds of oral, written, and online discourse. Rhetoric courses focus on how persuasion circulates in society, while writing courses teach students how to employ rhetoric and to write well in the modes, genres, and styles appropriate to particular disciplinary, institutional, and creative contexts. Visit course listings under [Innis College](#) in this Calendar.

Victoria College offers a minor program called [Creative Expression and Society](#). It has two components: (1) workshop-style courses allowing students to develop skills in creative expression and communication, and (2) courses encouraging students to analyze the relationship

between creative arts and society. Visit course listings under [Victoria College](#) in this Calendar.

[Trinity College](#) offers the course [TRN478H1](#) (Science Writing for Non-Scientific Audiences). It focuses on a diversity of non-scientific audiences and writing styles.

The University of Toronto at Mississauga (UTM) offers a major and minor program in Professional Writing and Communication. The University of Toronto at Scarborough (UTSC) offers a major and minor program in Creative Writing. Consult with your college registrar about taking courses at either campus, and see the UTM and UTSC calendars for more detail about courses offerings.

## English Language Learning Opportunities

The [English Language Learning \(ELL\) Program](#) offers undergraduates in Arts and Science a variety of ways to develop both oral and written communication. Intensive non-credit mini-courses are offered during fall and winter reading weeks and during the summer. During the fall and winter terms, programming includes free drop-in workshops using a variety of interesting activities to improve speaking, and also an online component for improving academic reading and writing.

## Writing Centres

The writing centres at undergraduate colleges will help you develop the writing and critical thinking skills you need throughout your university studies. They offer, free of charge, both group and individual instruction.

Group instruction is offered through both in-course instruction and a series of workshops called Writing Plus. These intensive group workshops help prepare you to meet the expectations of university writing. They cover all stages of writing university papers, from understanding the assignment to revising the final draft. They also provide targeted advice for handling your reading load and the challenges of studying for tests and exams. Special sessions focus on writing admissions statements for graduate and professional programs. Dates and locations are listed online in the Writing Plus section of [www.writing.utoronto.ca](http://www.writing.utoronto.ca).

In individual consultations, trained writing instructors help you improve your ability to plan, write, and revise, focusing on course writing assignments of your choice. Instructors are familiar with writing conventions in the whole range of Arts and Science courses; many have specialized training in teaching students whose first language is not English. You are entitled to use the writing centre of the college where you are registered. Most colleges also allow students from other colleges to book appointments for writing assignments in a college program

course. All the college writing centres use an online booking system that requires your UTORid for login. More information is available in the Writing Centres section of [www.writing.utoronto.ca](http://www.writing.utoronto.ca). Here is a list of Arts and Science writing centres:
